Outline

1 Question

2 Solution

Question

Let E and F be events with $P(E) = \frac{3}{5}$ and $P(F) = \frac{3}{10}$ and $P(EF) = \frac{1}{5}$.
Are E and F independent?

Solution

Given

$$P(E) = \frac{3}{5}, P(F) = \frac{3}{10} \text{ and } P(EF) = \frac{1}{5}$$

Theorem

Two sets, say A and B, are independent iff $P(AB) = P(A)P(B)$

Conclusion

$P(E)P(F) = \frac{3}{5} \times \frac{3}{10} = \frac{9}{50} \neq \frac{1}{5} \neq P(EF)$. Thus, the two sets are not independent.
